About

I am a web developer passionate about blockchain technology. Over the last 5 years, I have been learning and building web applications while studying computer science at the university.

I also garnered interest in blockchain technology early on and have been actively involved in its development. I am a member of various blockchain communities and keep myself updated with the latest trends and developments in the space. I am also a freelance writer and have published several articles on the subject.

I have a solid understanding of various technologies, including Express.js (Node.js framework), React.js (JavaScript framework), Next.js (JavaScript framework), TailwindCSS (Cascading Style Sheets framework), Solidity (programming language for EVM blockchains), Figma (Graphics design | UI/UX), and more.
